

All,

IT have tested and validated support for EMM running on iOS6 on all iDevices.
Below are some recommended tips to help you with your update:

- Perform a backup of your device prior to the update
- Plug your device into a power source during the update as this is a very large update and could take some time
- After the update has completed, use the EMM App to perform an EMM *Update Configuration*

After the update we recommend the following items be disabled for security concerns

- **Photo Stream Sharing** (enabled by default)
 - o To disable navigate to *Settings > Photos & Cameras > Shared Photo Stream* - select **OFF**

- **Ad tracking**
 - o Navigate to *Settings > General > About > Advertising > Limit Ad Tracking* - select **ON**
